

Group 12 Peer Testing Instructions

Team Information

- a. UWM Roommate Finder – Group 12
- b. Team members' names
Will Peters, Maxwell Krug, Andrew Meder, Fernando Rodriguez, Carter Piepenburg, Christian Hernandez
- c. If you have any questions, please contact us
Will- wcpeters@uwm.edu Max- maxkrug@uwm.edu

System Overview

A brief description of your project from a user's perspective. What does it do and who is it for?

Our project is an application that allows UWM students living in the dorms (or planning to) to find roommates. Users create a profile with their preferences for dorm life and can explore other users' profiles to find and chat with compatible roommates. It's for incoming freshmen and anyone who plans to dorm in the future.

Access Instructions

Download Docker Desktop:

<https://www.docker.com>

Clone the repository:

[carterpiepenburg1/uwmroommatefinder](https://github.com/carterpiepenburg1/uwmroommatefinder)

Drop the 3 given files into your cloned repository as so:

Longer .env: Drop into the uwmroommatefinder/ folder.

Shorter .env: Drop into the uwmroommatefinder/frontend/ folder.

JSON file: Drop into the uwmroommatefinder/ folder.

Open a terminal, cd into uwmroommatefinder/

Run: docker compose up --build

Wait ~2 minutes for everything to build, then visit <http://localhost:5173/>

That's it. To close the application, run CTRL+C in the terminal, then run:

`docker compose down`

If you want to reset the database, run:

`docker compose down -v`

Using the site

- Make sure to login with your UWM email
- Make sure to fill out the 2 forms that show on the dashboard when you login
- If you go to explore and connect, and there's no users being shown, try tweaking your profile form fields 'Gender', 'Preferred Dorm', and 'Term'
 - Currently the algorithm only shows you users who match those fields
- Keep in mind all users and notifications are fake users, they only exist to test site functionality before we test on a live server with real people.

Required Test Scenarios

Describe 2–3 core tasks you want the other team to perform when testing your system (e.g., registering, creating an item, submitting a form)

1. Update default profile with dorm preferences, then check Explore and Connect page. Try using the search bar as well as the filters tab.
2. Accept one or more match requests in the Notifications tab, then try sending a message to your new group chat in the Chat page.
3. Accept a match request in the Notifications tab, check the Your Group page to view your match's checklist, then create a personal checklist with several items in the Checklist page (maybe check off some of the items), check the Your Group page again, you should see your checklist along with your match's checklist (checked off items should be visible but crossed out).

Optional Test Scenarios (Optional)

1. Accept a Match Request in the Notifications tab, check the Your Group tab to ensure you are now in a group, leave the group on the Your Group tab, you should no longer be in that group.
2. Go to the .env file you added into the uwmroommatefinder folder, and add your UWM email to the ADMIN_EMAILS field. After doing this, whenever you log in it should redirect you to the admin page. Feel free to play around with this page.
